Intranet Portal – Requirement Scope Document

1. Objective

The objective of this project is to design and develop a secure, modular, and user-friendly Intranet Portal that serves as a centralized platform for internal communication, document access, employee services, compliance, and workflow management. The portal will streamline internal processes, enhance employee engagement, and improve organizational transparency.

2. Technology Stack

Dockerized Microservices Architecture

Container	**Description**	**Technology Stack**
Frontend	User interface components, dashboard, routing, and interaction logic	Template: - React CSS: - Bootstrap or Tailwind CSS Build Tool: - Vite (for faster build times and modern development experience)
Backend	Business logic, user management, and workflow automation	Platform: - PHP (8.3) Framework: - Laravel – it is recommended over SLIM-PHP for rich feature set, ecosystem, and scalability and robustness.
DMS	Document Management System for internal documents	**Paperless-ngx**
API Gateway	Middleware layer to bridge frontend, backend, and third-party services	Node.js with Express or PHP microserviceHandles authentication, routing, and orchestration

3. Core Functional Modules and Key Features

3.1 User Authentication & Authorization

- SSO via Microsoft Office 365

- Integration with **KEKA** for Single Sign-On (SSO) and authentication. {*This option needs to be verified with HR team*}
- Role-based access control (Admin, HR, Employee, IT, Legal). Role needs to be define as Office365 Groups
- Multi-factor authentication (optional)

3.2 Personalized Dashboard

- Display of announcements, memos, tasks, and quick links
- Interactive widgets for calendar, QR codes, and approvals
- User-specific views and notifications

3.3 Key Application Links

- Bookmark and launch essential applications (JIRA, Socly, KEKA, Teams, etc.)
- Categorized and searchable link repository

3.4 Event Calendar

- Monthly/weekly views of upcoming holidays, training sessions, team events
- Sync with Outlook Calendar (optional)
- RSVP and event reminders

3.5 Employee Directory

- Comprehensive directory with profile pictures, departments, contact details
- Filter/search by location, department, designation
- Integration with KEKA or internal HR database

3.6 Document Repository

- Centralized access to:
    - Policies and SOPs
    - HR and Legal documents
    - Departmental forms and templates
    - Lender Codes, Agreements
- Features:
    - Document versioning
    - Metadata tagging
    - Permission-based access
    - Full-text search (using OCR via Paperless-ngx)

3.7 Asset Request Management

- Request forms for IT hardware/software
- Approval workflows (manager and IT team)
- Inventory and status tracking
- Email and in-app notifications
- List of allocated assets with tagging (*sr.no / asset id / asset name*)

3.8 HR Process

Access Control: Restricted to users with the HR role only.

Functionalities:

- **Create Job Openings**
- **Add Candidates**
- **Assign Candidates to Jobs**
- **Request Interviews**
- **Release Offer Letters**
- **Initiate Background Checks**
- **Onboard Employee**
- **Trigger Email ID Creation (via Microsoft Graph API)**
- **Mark Resignation & Notify IT for Asset Revocation**

Data Entities:

- Job
- Candidate
- Candidate Job (junction table)
- Interview
- Offer
- Background Check
- Employee
- Onboarding Task

Integration:

- Microsoft Graph API for provisioning email accounts.

Notifications:

- Notify IT automatically on resignation.

- Notify employees on email provisioning.
- Onboarding task auto-creation.

3.9 Asset Management

Access Control: Restricted to users with the IT Manager role only.

Functionalities:

- **Maintain Asset Dashboard**
- **Add / Update / Delete Assets**
- **Allocate / Reassign Assets to Users**
- **Mark Assets as Returned**
- **Initiate Decommission Requests**
- **Track Asset Assignment History**
- **View Audit Logs**

Data Entities:

- IT Asset
- Asset Assignment
- Asset Decommission Request
- Audit Log

Notifications:

- Email reminders for overdue asset returns
- Alerts for new decommission requests

3.10 Memo & Approval Workflow

- Create and circulate official memos
- Multi-level approval system
- Track status and history of approvals
- Digital signatures (optional). (*This to be discuss with SignDesk Team*)

3.11 Announcements & News Feed

- Admin/HR can publish announcements
- Pin important notices
- Time-bound expiration of posts
- Acknowledgment tracking

3.12 QR Code Manager

- Store and share QR codes for Wi-Fi, cafeteria apps, parking, emergency contacts
- Download and scan functionality
- Dynamic QR code generation for custom needs

3.13 Dashboards & Analytics

- HR Dashboard: attrition, hiring, birthdays, anniversaries
- IT Dashboard: ticket volumes, asset usage, approval logs
- Compliance Dashboard: policy acceptance, training completions

3.14 Helpdesk & Support (Optional Phase 2)

- Ticket submission and tracking
- Categorization by issue type
- Assignment and resolution workflow
- Knowledge base and FAQs

3.15 Internal Job Posting (Optional Phase 2)

- List internal openings
- Apply and track status
- Manager recommendations

3.16 Surveys & Feedback (Optional Phase 2)

- HR or Admin can initiate surveys
- Anonymous or open feedback
- Real-time result charts

3.17 Wiki / Knowledge Base (Optional Phase 2)

- Departmental guides, troubleshooting tips
- Editable by authorized personnel
- Rich text editor support

4. Non-Functional Requirements

- **Security:** HTTPS, role-based access, audit logs, data encryption
- **Scalability:** Container-based deployment, docker-compatible
- **Performance:** Optimized asset loading, CDN integration, caching
- **Accessibility:** WCAG 2.1 compliant interfaces

- **Monitoring:** Central logging, uptime monitoring, analytics integration, with proper log file management and maintenance.

5. Deployment & Maintenance

- Version-controlled via Git
- CI/CD integration for deployment pipelines
- Staging and production environments
- Scheduled backups and periodic maintenance windows

6. Suggested Enhancements (Future Scope)

- MS Teams Integration
- AI Chatbot for HR queries
- Video announcements from leadership
- Mobile App version for Android/iOS

7. Conclusion

The Intranet Portal will function as a digital workspace, supporting employees across departments and hierarchies with tools, documents, services, and communications necessary for their daily operations. The architecture ensures scalability, integration capability, and maintainability.
